

# WSTYPE-4140 - A TOGRack Variation

v2.2, 2024-05-31, previously "WSTYPE-200951"

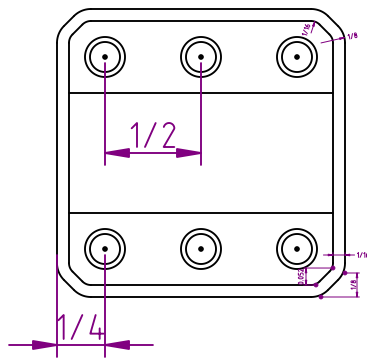

It's TOGRack but with case rims (1/16" thick, minus some margin) and slightly narrower (3/8" instead of 1/2") rails.

Mounting holes are all on a 1/2" grid, same as regular TOGRack.

Note that the outer and inner shape of the enclosure are identical to TOGridPile and their 'foot columns'. i.e. the outer corners have a 1/8" bevel whose corners are in turn rounded with a 1/8" radius, and the inner surface offset inwards 1/16".

Dimensions specified here are nominal.

Actual designs should offset surfaces inwards by 0.1mm or so.

← A 1.5" x 1.5" case, which is maybe the smallest that would make any sense at all, as it gives very little space for components.
